NORTH EASTERN RAILWAY

CE CIRCULAR NO. 86 OF YEAR 2002

**Sub:** Maintenance of loop lines and overshoots in yards wherever speed have been increased to 30 kmph.

Maintenance of loop lines wherever speed have been increased to 30 kmph should be carried out as per the instructions given below: -

1. Every S.E. (P. Way) in-charge must prepare maintenance plan for running loops along with maintenance of main line. The track on loop line shall be maintained to same standard as required for 30 kmph on main line.
2. Drainage of track is most important factor for proper maintenance of track parameters in yards. The network of cross and longitudinal drains in yards, earthen or masonry should be so planned that storm water is led away in least possible time. All drains shall be cleaned and repaired as a part of annual maintenance for running loops as well as for overshoots to loop lines.
3. The overshoots to loops should have same track structure as of running loops and its maintenance should be brought to the standard as that of running loops.
4. USFD testing of rails in loop lines should be under taken once in year.
